

Month - 1

Week 1:

- Knowing about tools like Jupyter, Google Colab, Scikit-learn, GitHub setup,
- Installing Jupyter, Google Colab, Scikit-learn, GitHub setup,
- Knowing the difference between AI/ML/DL,
- Basic Python.

Week 2:

- Advanced Python along with a Python project.

Week 3:

- Numpy, pandas and power bi.

Week 4:

- Statistics,
- Data analysis project.

Month – 2

Week 1 :

- Machine learning basics,
- Supervised and unsupervised machine learning.

Week 2:

- Model evolution and tuning.

Week 3:

- Machine learning project.

Week 4:

- Deep learning and neural network basics.

Month – 3

Week 1:

- Deep learning models and frameworks.

Week 2:

- Model evaluation.

Week 3:

- Deep learning project.

Week 4:

- Gen AI
 - Prompting techniques
 - GAN
 - Transformer-based model
 - Diffusion model
